2

spaced apart width of approximately one brush stroke. --

Please replace the paragraph beginning at line 17 on page 14 with the following:

-- Next, a series of brush strokes are placed into the output image along the curves. The strokes are oriented in accordance with the curve tangent direction. Each brush stroke is defined to have a foot print which defines where it may not overlap with other brush strokes. A brush stroke may only be placed along the curve if its foot print does not conflict with the foot prints already present in the output image. Any curves that do not have any brush strokes placed along them are discarded and the process of steps 7 and 8 are iterated in a slightly modified form until no curves are left. The slightly modified form of step 7 is to offset the curves by one brush stroke in the outward direction rather than the half brush stroke necessary when offsetting curves from the curve C1 of Fig. 4.--
